

POMPE CARBURANTE

2003-2004

FUEL PUMPS

FUEL SPECIALIST

Avvertenze

Tutti i lavori sul sistema di alimentazione del carburante devono essere eseguiti solo da personale specializzato. Si raccomanda vivamente l'osservanza di tutte le norme di sicurezza e di quelle sulla tutela ambientale previste dalle vigenti leggi.

- Assicurarsi che non ci sia tensione sulla pompa staccando il cavo di massa dalla batteria.
- Rispettare la polarità per evitare di danneggiare la pompa.
- Pulire sempre accuratamente il serbatoio e le tubazioni: la sporcizia è infatti la causa primaria dell'avaria di pompe appena sostituite.
- Non montare mai una pompa nuova senza il rispettivo filtro, non riusare filtri vecchi; in caso di richiesta di sostituzione in garanzia, la pompa deve essere sempre riconsegnata con il suo filtro.
- Le pompe in linea vanno sempre montate sotto il livello del serbatoio, il carburante deve arrivare alla pompa per caduta in caso contrario la pompa si surriscalda.
- Nel caso di unità immerse, ricordarsi di fare fuoriuscire l'aria dal circuito. A questo scopo far girare la pompa sino a quando non esce carburante dal tubo, quindi chiudere il circuito collegando il tubo al raccordo del coperchio.
- Controllare la tenuta dei raccordi idraulici del coperchio dell'unità immersa e posizionare il coperchio in corrispondenza del segno di riferimento (se presente) quando lo si rimonta al suo posto.

Important Notice

Any work in the fuel supply system must be carried out by skilled personnel only. Compliance with all the safety rules and environmental protection rules according to your local laws is strongly recommended.

- *Ensure no voltage is present in the pump circuit by removing the ground cable connection from the battery.*
- *Follow the correct circuit polarity to avoid pump damages.*
- *Always clean carefully the tank and the fuel hoses: dirt is the main failure cause of recently replaced fuel pumps.*
- *Never install a new pump without its filter, always replace the old filter; in case of defect claim for guarantee replacement, the fuel pump must be delivered back together with its filter.*
- *In-line pumps must always be installed below the tank level: the fuel has to reach the pump inlet by simple drop, otherwise the pump becomes overheated.*
- *In case of in-tank units, remember to remove the air from the fuel supply circuit. To this purpose, turn on shortly the pump unit until the fuel comes out from the return hose and, at this moment, shut off the pump and close the fuel circuit by re-connecting the return hose to the relevant unit cover inlet.*
- *Check the in-tank unit cover fittings for leakages and ensure that any cover marking (if present) is corresponding to the relevant position marking when the cover is fitted back into its location.*
